Dear Customer,

You are holding the 33rd edition of the VKF Renzel main catalogue in your hand. As mentioned in the last edition, this medium is shifting more and more in an online direction through our national and international web shops and digital catalogues accordingly. However there is always a demand, even in small quantities, for this work of reference. Therefore we reached the decision to create a new printed version from FSC certified material. Differently though from in previous years, we are only sending the catalogue on request to be more efficient and environmentally friendly.

As usual you will find the whole range online at **www.vkf-renzel.com**. This year we'd particularly like to highlight the new "Zello" products which, by market demand, are based on environmentally friendly materials such as display carton. Details can be found at **vkf.re/zello**

Automation is becoming more and more used in retail.

The VKF Group has been working with this for years already and offers, among other things, vending machines and solutions for collection stations through its "Kioske" business. These products achieve additional sales opportunities during times when no staff are available.

Thus, under the banner of Sales Promotion, we remain true to our motto and continue **to develop products which promote sales of your goods.**

Enjoy flicking through and we wish you continued sales success!

The Directors of VKF Renzel

Heinz Renzel Ansgar Hügging Joachim Ostendorf

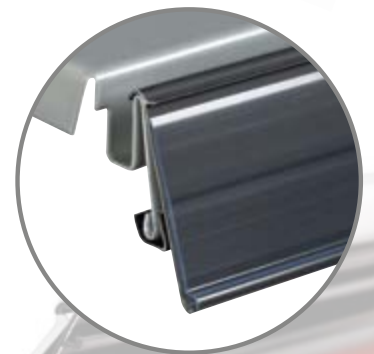

Management: Simon Papas

SUSTAINABILITY

Discussions about sustainability bring with them uncertainty but also a rethinking. As we process plastics among other things, we have thought about how to move forward with this.

We have already been working with alternative materials for a long time. As far back as 2011 we were the first manufacturer of shelf edge strips made from PLA. Although demand was still low we persevered with the topic of natural material based plastics and developed it further. Alongside renewable raw materials, recycled materials became an important component.

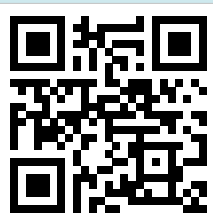

Recyclates consist of scrap which is conditioned and reused as raw material for a new process. The scrap comes from very different sources. In part it is products such as shelf edge strips which are shredded, regranulated and then used to make new profiles or baskets. Another part is from post consumer waste which we acquire from certificated recycling companies. Products made in this way are themselves then recyclable again thereby closing the cycle.

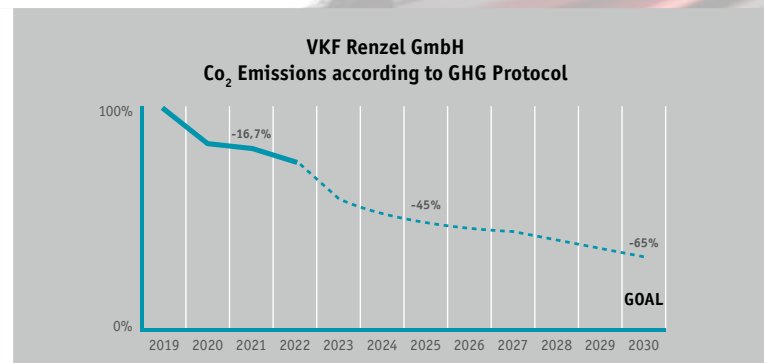

Scrap is shredded, ...

ground down ...

... and reworked.

Further information on the sustainability including our CO₂ footprint can be found here

Product Development and Design

The problem-solving begins with your request. The first phase of product development is generating ideas, when **concept suggestions are gathered**. Then follows the technical planning in **CAD systems** allowing for your specifications and observing technical, economic and ecological aspects. The **virtual data models** form the basis for all subsequent working processes such as visualisation, technical drawings, prototypes, tool and mould making. The development of new products is just as achievable as the redevelopment of existing ones.

Plastics Processing

We convert plastics in to displays for different purposes. These plastics include **acrylic (PMMA)**, **ABS**, **polystyrene (PS)**, **PVC**, **polycarbonate (PC)** and **PET** as well as **sustainable plastics** which are made from renewable raw materials. More and more industries are using **recycled materials**, particularly plastics waste, which closes the material life cycle and preserves resources.

We use the following processes with plastics: **extrusion**, **injection moulding**, **thermoforming** and **high frequency welding**.

Metal Processing

In metal processing we use semi-finished parts in aluminium, steel and stainless steel. These are worked on in the different production areas to create a finished product.

Finishing techniques such as **lasering**, **stamping**, **chamfering**, **forming**, **nibbling**, **welding**, **sawing** and **pressing** are used.

The surfaces of the finished products are refined with processes such as **powder coating**, **galvanising**, **chrome plating** or **anodising**.

Wood Processing

In contrast to plastics is the naturally occurring raw material wood. To be able to offer alternative materials we also process wood. Displays in wood give modern POS a high quality, natural appearance.

In combination with other materials such as metal or acrylic, displays are created which have that certain something. As well as **sawing** and **planing** we work with **CNC routers**.

Tool Production

So that the various plastic processing methods can be used, we make the required tools ourselves, e.g. **punches** for PVC processing, **extrusion tools** for extruded products, **vacuum forms** and injection **moulding tools**.

The files for creating these tools are defined using models from product development. With the help of tool production, third party tools can be adapted to and used with our machines.

Printing

Nearly all products can be customised with varying processes. To realise all customer requirements **screen**, **digital**, **transfer**, **pad** and **offset printing** are used.

Additionally there is the option to finish products with **engraving**, **etching** or **embroidery**.

Assembly and Logistics

In the logistics department storage, management, picking and packing take place across an area of 6000 m². A range of services such as **assembly**, **distribution** and **storage** are offered to allow customer-friendly despatch.

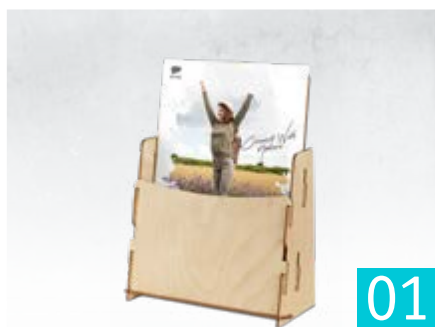

Fully **automated** and **paper-free picking** promotes sustainability and in addition offers shorter picking times which in turn ensure a quick despatch of products. Shipping is via freight forwarder or courier.

Services: renzel.agentur

The in-house advertising agency renzel.agentur supports you in presenting your company. The services run from the creation of a **corporate design** through **headed paper** to classic **printed media** for your company. Furthermore, up to date **websites**, complex **online shops**, permanent **maintenance of websites** and **hosting** of the websites are taken over. renzel.agentur allows VKF Renzel GmbH to offer customer specific **order platforms** which round off the fulfilment range of the company. The range of services of renzel.agentur is completed with the development of extensive **cross-media campaigns**.

Divider System

- shelf management and price labelling:
- shelf dividers
- shelf edge strips
- stock pusher systems
- perfect orientation
- optimum visibility
- easy removal and filling of goods
- options for refrigeration and deep freeze

Eliminate chaos on the shelf ... and create order!

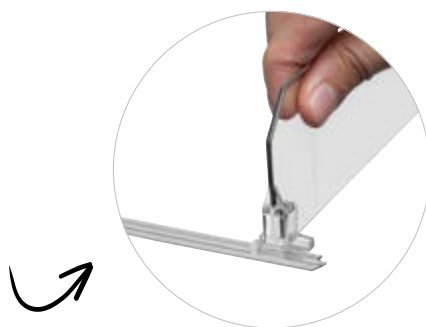

Benefits of using dividers at the PoS / PoP:

- secure shelf space for a group of articles
- the customer-friendly overview significantly increases the sale of goods
- preservation of shelf facing
- fixed placement of the product range is ensured for manufacturers, retailers and customers alike

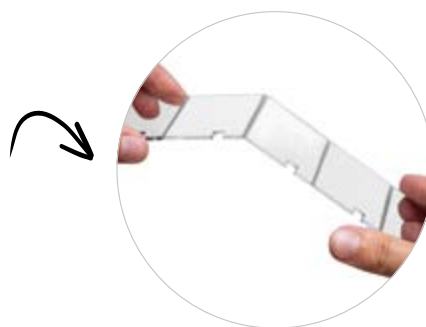

Quick and easy assembly!

Fit shelf edge strips such as LSP 26, LSP 39, DBR / MSP 26, GLS / MSP 26 or alternatively only the PEK basic profile.

Press on divider, determine required length where necessary.

For dividers with predetermined breaking points, the length of the divider can be adjusted by breaking off the individual sections.

Fix the divider system in place.

Finding the right mirror diameter

- 1. Determine the distance between you and the mirror.
- 2. Determine the distance between the mirror and the person to be seen.
- 3. Add both distances together.
- 4. In the column A+B find the corresponding distance in metres.
In the next field you will find the mirror diameter options.
The darker the field the better the view.

- Gantry System "Naxpro Truss" FD21 - FD24
- "Naxpro Truss" FD21 - FD24 - Accessories

Example of use

Naxpro Truss - Quality has a name

Today truss systems play an important role in construction, as well as in traditional uses such as discos and concerts, in exhibitions and shopfitting, event management, promotions and in commercial building.

As our 1, 2, 3 and 4 point trusses will withstand high loads in most cases, the safety and quality of our product is at the forefront. Through analysis, TÜV approval and annual checks of workstations, we guarantee our customers a consistent quality of product. These comply with the current standard Norm EN 1090 (formerly DIN 4113).

For the most part, hand finished components, quick lead times, high quality, a range of products and above all our reliable staff make Naxpro Truss traverses exactly what they are: trusses of the highest standards.

Bring colour in to play! We will make your exhibition stand unique!
Name your RAL colour and we will create a quotation for you.

Gantry Profile "Naxpro Truss" FD 21

Truss system with single point connection, whose strengths are its light weight, small size and flexibility.

FD 21 traverses can be combined with all components of the "Naxpro Truss" systems FD 22, FD 23 and FD 24 and are suitable for the decorative construction of display holders, geometric shapes such as cubes, promotional frames and ballustrades.

Due to the flexibility of the system, uses are nearly unlimited.

Printing Costs for Name Badges

We are happy to offer you high quality printing for our name badges on request.

The costs for this depend on the type of printing, the number of print colours and the quantity of badges required.

We can offer digital printing from as little as 10 pieces, while larger runs can usually be realised cost-effectively using screen printing.

From the layout to the proof, film and screen production to the finished print, you get everything from a single source.

Unprinted badges are delivered unassembled.
Accessories such as paper inserts and cover sheets are included loose in the box.

Are you looking for a unique promotional item or giveaway?

Through customisation of advertising material, you ensure the long-term presence of your business with partners, customers or colleagues. From lighters to umbrellas. The variety of our range covers the whole world of promotional items. Our in-house print shop also implements various finishing techniques that make your promotional items an eye-catcher.

Design options for textiles

Besides printing, embroidery is a high quality alternative for textiles. Coats of arms, names, logos and many other motifs can be realised. We can also offer 3D embroidery.

Furthermore, there is the possibility to customise textiles with laser engraving. A laser is used to "burn" the motif into the surface of the material. This technique of is suitable for thicker fabrics.

We will be happy to advise you!

How NFC works: Near Field Communication (NFC):

NFC, is an international transmission standard for wireless exchange of data over short distances. To transfer data via NFC, the smartphone or tablet is held up to a pre-programmed NFC TAG, which then for example activates a specific application or function in the device. In the "Inside NFC PENS", the NFC TAG is located directly under the inside NFC logo. This ensures the uncomplicated transfer of information to the smartphone or tablet. Combine analogue writing and advertising with the interactive world using the UMA inside NFC PENS.
